# **Documentation History** play-with-torch

#### 1. Section 1

#### 0. Tools

0.1. Hardware

- + RasberryPi 4 Model B Rev 1 (RPi), RAM: 4 GB and Processor 4-core @ 1.5 GHz
- + microSD Card 64 GB
- + 5M USB Retractable Clip 120 Degrees WebCam Web Wide-angle Camera Laptop U7 Mini *or* Raspi Camera
- 0.2. Tested Software
- + Raspbian 10 (Buster) [armv7l] 32 bit, install on RPi
- + PyTorch [armv7l]: torch 1.6.0 and torchvision 0.7.0
- + Python min. ver. 3.6

## 1. Install the prerequisites

+ Test using above reference the result is: In Raspbian, version python is 3.7.3

+ Source: <a href="https://github.com/ljk53/pytorch-rpi">https://github.com/ljk53/pytorch-rpi</a>

**torch 1.6.0 [armv7l]**: <a href="https://github.com/ljk53/pytorch-rpi/blob/master/torch-1.6.0a0%2Bb31f58d-cp37-cp37m-linux">https://github.com/ljk53/pytorch-rpi/blob/master/torch-1.6.0a0%2Bb31f58d-cp37-cp37m-linux</a> armv7l.whl

Move file to

\$ scp torch-1.6.0a0+b31f58d-cp37-cp37m-linux\_armv7l.whl pi@xxx:/home/xxx/Downloads pi@raspberrypi:~/Downloads \$ pip3 install torch-1.6.0a0+b31f58d-cp37-cp37m-linux\_armv7l.whl

- + Install packages
- \$ sudo apt install build-essential make cmake git python3-pip libatlas-base-dev
- \$ sudo apt install libssl-dev
- \$ sudo apt install libopenblas-dev libblas-dev m4 cython python3-yaml
- + Update cmake to > 3.15
- \$ wget https://github.com/Kitware/CMake/releases/download/v3.18.0-rc1/cmake-3.18.0-rc1.tar.gz
- \$ sudo apt install libssl-dev
- \$ cd cmake-3.18.0
- \$ mkdir build && cd build
- \$ cmake ..
- \$ make
- \$ sudo make install
- \$ sudo apt remove cmake
- \$ sudo ln -s /usr/local/bin/cmake /usr/bin/cmake
- \$ sudo ldconfig
- + Make WASP to 2048 MB
- \$ nano /etc/dphys-swapfile

CONF SWAPFILE=2048M

\$ sudo dphys-swapfile setup

\$ sudo dphys-swapfile swapon

\$ free -h

```
pi@raspberrypi:~ $ free -h
                                        free
                                                   shared buff/cache
                                                                        available
              total
                           used
                                       2.0Gi
Mem:
              3.7Gi
                            65Mi
                                                   8.0Mi
                                                                1.6Gi
                                                                             3.5Gi
              2.0Gi
                                       2.0Gi
Swap:
                              0B
```

#### + Test torch below:

it's indicator that works.

```
pi@raspberrypi:~/DetectorPi/test $ python3 test_torch.py
tensor(2.)
tensor(1.)
tensor(1.)
    Parameter containing:
tensor([[-0.3264, 0.1669, -0.0741],
        [ 0.3053.
                  0.1813, 0.3761]], requires grad=True)
b:
    Parameter containing:
tensor([-0.4165, 0.0386], requires grad=True)
loss: 1.3495376110076904
dL/dw: tensor([[-0.3721, 0.0205, -1.1976],
        [ 0.3850, 0.3495, 1.0424]])
dL/db: tensor([-0.7008, -0.0061])
loss after 1 step optimization: 1.315846562385559
pi@raspberrypi:~/DetectorPi/test $
```

# **2.** Build PyTorch from the source (DO THIS INSTRUCTION ON Raspberry Pi 4) Ref:

- + <a href="https://nmilosev.svbtle.com/compling-arm-stuff-without-an-arm-board-build-pytorch-for-the-raspberry-pi">https://nmilosev.svbtle.com/compling-arm-stuff-without-an-arm-board-build-pytorch-for-the-raspberry-pi</a> [best complete explanation]
- + https://github.com/nmilosev/pytorch-arm-builds [complete explanation]
- + https://gist.github.com/akaanirban/621e63237e63bb169126b537d7a1d979
- + https://github.com/Ben-Faessler/Python3-Wheels [good]
- + <a href="https://github.com/Kashu7100/pytorch-armv7l">https://github.com/Kashu7100/pytorch-armv7l</a> [finish]

Build PyTorch from the source to get **torchvision 0.7.0 [armv7l]** wheel.

- + Install package
- \$ sudo apt install libopenblas-dev libblas-dev m4 cmake cython python3-dev python3-yaml python3-setuptools

```
$ sudo apt install libavcodec-dev libavformat-dev
$ sudo apt python3-wheel python3-pillow python3-numpy
```

# \$ cd pytorch

pi@raspberrypi:~/pytorch \$ git clone --recursive https://github.com/pytorch/vision -branch=release/0.7

pi@raspberrypi:~/pytorch \$ cd vision

+ Run command below:

```
pi@raspberrypi:~/pytorch/vision $ export NO_CUDA=1 pi@raspberrypi:~/pytorch/vision $ export NO_DISTRIBUTED=1 pi@raspberrypi:~/pytorch/vision $ export NO_MKLDNN=1 pi@raspberrypi:~/pytorch/vision $ export BUILD_TEST=0 # for faster builds pi@raspberrypi:~/pytorch/vision $ export MAX_JOBS=4 # I have 4 cores
```

# pi@raspberrypi:~/pytorch/vision \$ export NO\_NNPACK=1 # update July 19, this is optional, can build with NNPACK

# pi@raspberrypi:~/pytorch/vision \$ export NO\_QNNPACK=1 # same as above, can be omitted

+ Run command below and On Raspberry Pi 4 4GB with 2294MHz it take round **3 hours** pi@raspberrypi:~/pytorch/vision \$ python3 setup.py sdist bdist\_wheel

### Problem: ERROR, need install one-by-one packages.

```
e-packages/torch/include -I/home/pi/.local/lib/python3.7/site-packages/tor
ch/include/torch/csrc/api/include -I/home/pi/.local/lib/python3.7/site-packages/torch/include/TH -I/home/pi/.local/lib/python3.7/site-packages/torch
/include/THC -I/usr/include/python3.7m -c /home/pi/pytorch/vision/torchvis
ion/csrc/cpu/video reader/VideoReader.cpp -o build/temp.linux-armv7l-3.7/h
ome/pi/pytorch/vision/torchvision/csrc/cpu/video reader/VideoReader.o -std
c++14 -DTORCH API INCLUDE EXTENSION H -DTORCH EXTENSION NAME=video reader
 -D GLIBCXX USE CXX11 ABI=1
In file included from /home/pi/pytorch/vision/torchvision/csrc/cpu/decoder

                  from /home/pi/pytorch/vision/torchvision/csrc/cpu/video_r
eader/VideoReader.cpp:6:
/home/pi/pytorch/vision/torchvision/csrc/cpu/decoder/defs.h:18:10: fatal e
      libswscale/swscale.h: No such file or directory
 #include
compilation terminated.
error: command 'arm-linux-gnueabihf-gcc' failed with exit status 1
pi@raspberrypi:~/pytorch/vision $
```

Solution: use step 3. build pytorch from the source.

# 3. Build PyTorch from the source (WITHOUT Raspberry Pi 4)

Ref:

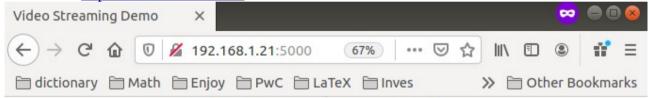

- + https://nmilosev.svbtle.com/compling-arm-stuff-without-an-arm-board-build-pytorch-for-the-raspberry-pi
- + Cross compiling for RaspberryPi: https://blog.kitware.com/cross-compiling-for-raspberry-pi/
- + QEMU documentation: <a href="https://www.qemu.org/docs/master/user/main.html">https://www.qemu.org/docs/master/user/main.html</a>

# 4. Install opencv\$ pip3 install opencv-python

```
pi@raspberrypi:~/DetectorPi $ python3
Python 3.7.3 (default, Jul 25 2020, 13:03:44)
[GCC 8.3.0] on linux
Type "help", "copyright", "credits" or "license" for more information.
>>> import cv2
>>> print(cv2.__version__)
4.5.1
>>>
```

Run in Pi using command below pi@raspberrypi:~/VisionPi/test \$ python3 test\_opencv.py --source rtsp://Anonymous:Anonymous@192.168.1.11:554

Check here <a href="http://192.168.1.21:5000/">http://192.168.1.21:5000/</a>

Video Streaming Demonstration

<u>Problem</u>: During my testing, JIT tracing didn't work for 32 bit. As JITing your model is something that comes to mind with ARM, I thought it was better to work with the (working) 64 bit version.

### **NanoDet**

Last update: Sep 5, 2021

Ref: <a href="https://github.com/RangiLyu/nanodet">https://github.com/RangiLyu/nanodet</a>

### >> Train Custom Dataset

Ref: https://github.com/RangiLyu/nanodet#how-to-train

+.1. Prepare dataset

If your dataset annotations are pascal voc xml format, refer to

config/nanodet\_custom\_xml\_dataset.yml.

+.2. Prepare config file

## Detail explanation: <a href="https://github.com/RangiLyu/nanodet/blob/main/docs/config\_file\_detail.md">https://github.com/RangiLyu/nanodet/blob/main/docs/config\_file\_detail.md</a>

- Copy and modify an **example yml config file** in config/ folder.
- Change **save\_path** to where you want to save model.
- Change **num\_classes** in models->arch->head.
- Change **image path** and **annotation path** in both data->train and data->val.
- Set **gpu ids**, **num workers** and **batch size** in device to fit your device.

gpu\_ids: CUDA device id. For multi-gpu training, set [0, 1, 2...].

workers\_per\_gpu: how many dataloader processes for each gpu.

batchsize\_per\_gpu: amount of images in one batch for each gpu.

Issue1: <a href="https://stackoverflow.com/questions/53998282/how-does-the-number-of-workers-parameter-in-pytorch-dataloader-actually-work">https://stackoverflow.com/questions/53998282/how-does-the-number-of-workers-parameter-in-pytorch-dataloader-actually-work</a>

So when **num\_workers=2** you have at most 2 workers simultaneously putting data into **RAM**. So setting **workers to number of CPU cores** is a good rule of thumb, nothing more.

- Set **total\_epochs**, **lr** and **lr\_schedule** according to your dataset and batchsize.

-PASCAL VOCO dataset structure:

Ref0: <a href="http://host.robots.ox.ac.uk/pascal/VOC/voc2012/">http://host.robots.ox.ac.uk/pascal/VOC/voc2012/</a>

## Ref2: https://pytorch.org/vision/stable/datasets.html#torchvision.datasets.VOCDetection

```
CLASS torchvision.datasets.VOCDetection(root: str, year: str = '2012', image_set: str =
        'train', download: bool = False, transform: Optional[Callable] = None,
        target_transform: Optional[Callable] = None, transforms: Optional[Callable] =
       None)
       Pascal VOC Detection Dataset.
                Parameters
                  • root (string) - Root directory of the VOC Dataset.
                  • year (string, optional) - The dataset year, supports years "2007" to "2012".
                  • image_set (string, optional) - Select the image_set to use, "train", "trainval" or "val". If
                     year=="2007", can also be "test".
                  • download (bool, optional) - If true, downloads the dataset from the internet and puts it in root directory. If
                    dataset is already downloaded, it is not downloaded again. (default: alphabetic indexing of VOC's 20
                    classes).
                  • transform (callable, optional) - A function/transform that takes in an PIL image and returns a transformed
                    version. E.g, transforms.RandomCrop
                  • target_transform (callable, required) - A function/transform that takes in the target and transforms it.
                  . transforms (callable, optional) - A function/transform that takes input sample and its target as entry and
                    returns a transformed version.
